DIMENSIONS:
Flatbox Midi: 380 x 92 x 210 mm Flatsub Stereo-One: 550 x 165 x 300 mm

PRICE: €1,125

DLS Flatbox Midi + Flatsub Stereo-One

Set 2.1 of flat and wireless speakers, for which you will only need a cell phone to listen to your favorite music

This interesting and flexible set, which consists of three acoustic enclosures -an additional two for an active subwoofer- stands out for the quality of sound that it offers as well as for its flexibility in placement thanks to its flat elements. Plus, it is enough to have a cell phone or a PC with Bluetooth capability for the set to start producing sound, without requiring an amplifier or a CD.

Well combined technique and design

If there is something that makes these speakers stand out from the rest of the models on the market, it is that the DLS speakers are almost flat. With respect to this characteristic they are already the second generation of equipment developed by this highly prestigious Swedish company, which applies its vast knowledge in speaker

development to create nearly flat sets that can be placed vertically or horizontally and which are ideal for use in homes where design is important, in Home Cinema systems or to combine with current flat TV monitors. And best of all, this system is not only a versatile audio system capable of covering the entire audio spectrum or providing the necessary volume to fill up 20 m² rooms, but it is also a set that requires no external amplifier thanks to its Subwoofer which includes an 80 W amplifier, plus another two of 35 W to two satellites, nor any cables to transfer music from a cell phone or a PC thanks to the Bluetooth capability of the Subwoofer.

NOTABLE FEATURES:

- The great sound produced by this set despite the reduced size of its different baffles.
- The Subwoofer which includes three digital amplifier steps of 80 W + 2 x 35 W, used to trigger satellites.
- The Bluetooth 2.1 connectivity which allows audio streaming from cell phones or PCs.

Accésit

POLK AUDIO VS 265RT

Baffle muy parecido conceptualmente a los DLS Flatbox el cual puede ser emplazado sobre la pared al estar constituido por un gabinete tremendamente plano de tan sólo 530 x 90 x 225,4 mm, como encastado directamente en la mampostería, modelo que electroacústicamente está constituido por dos woofer de 6,5" de polipropileno más por un tweeter de 1".

Precio: 979 euros

REL ACOUSTICS HABITAT1

Subwoofer plano de altísimas prestaciones el cual no sólo destaca por montar dos transductores frontales de 6,5" más una membrana pasiva de 10" o por su potente amplificador interno de clase D de 150 W eficaces... sino porque encima tiene un diseño muy conseguido y hasta puede funcionar sin cables.

Precio: 1.590 euros

Versátil modelo susceptible de ser tanto colgado de la pared como encastado directamente en ella
